

Scenario Name	 API Testing
Weak Prompt	Write API test cases for user registration.
What I Feel is Missing	No Detailed Prompt
I Instruction	[MANDATORY] Generate testcases for Registration API “/country/subscription” [MANDATORY] Generate steps to verify the registration API call 3 different API Profile,Account,Card and the success Response Received [MANDATORY] Generate 10 High priority cases [MANDATORY] Include Postive and negative cases [IMPORTANT] Profile response with values mandatory to Proceed for Account and Card
C Context	Act as a Senior QA Engineer to write the Test Case for User Registration
E Example	TCID Description Priority Pre conditions Steps Expected Result Assigned To
P Persona	Act as a Test lead to review the testcases and Provide Score on the coverage
O Output Format	Downloadable excel to be attached in ADO Test Plan
T Tone	Professional Tone with clarity
☒ Rewritten Prompt	Context Act as a Senior QA Engineer to write the Test Case for User Registration Instruction [MANDATORY] Generate testcases for Registration API “/country/subscription” [MANDATORY] Generate steps to verify the registration API call 3 different API Profile,Account,Card and the success Response Received [MANDATORY] Generate 10 High priority cases [MANDATORY] Include Postive and negative cases [IMPORTANT] Profile response with values mandatory to Proceed for Account and Card Example: TCID Description Priority Pre conditions Steps Expected Result Assigned To Persona Act as a Test lead to review the testcases

	Output Downloadable excel to be attached in ADO Test Plan Tone: Professional Tone with clarity
Observations	

Write API test cases for user registration.

TC ID	Test Case Title	Priority	Test Type	Preconditions	Request Data	Expected Result
API_REG_001	Verify successful user registration with valid data	High	Positive	Registration API is available	Valid name, email, password, phone	API returns 201 Created, success message, user ID generated
API_REG_002	Verify registration with all mandatory fields populated	High	Positive	API available	All required fields with valid values	User registered successfully
API_REG_003	Verify registration with optional fields omitted	Medium	Positive	API available	Only mandatory fields provided	Registration succeeds
API_REG_004	Verify registration with existing email address	High	Negative	User already exists	Existing email with valid data	API returns 409 Conflict or appropriate error message
API_REG_005	Verify registration with duplicate	High	Negative	Mobile number	Existing mobile number	API returns validation error

TC ID	Test Case Title	Priority	Test Type	Preconditions	Request Data	Expected Result
	mobile number			already registered		
API_REG_006	Verify registration without email field	High	Negative	API available	Email field omitted	API returns 400 Bad Request with validation message
API_REG_007	Verify registration without password field	High	Negative	API available	Password field omitted	API returns 400 Bad Request
API_REG_008	Verify registration with invalid email format	High	Negative	API available	Email: "user.com"	API returns email validation error
API_REG_009	Verify registration with weak password	High	Negative	API available	Password not meeting policy	API returns password policy validation error
API_REG_010	Verify registration with password below minimum length	High	Boundary	API available	Password less than minimum allowed length	API rejects request with validation error
API_REG_011	Verify registration with password at minimum allowed length	Medium	Boundary	API available	Password exactly minimum length	Registration succeeds

TC ID	Test Case Title	Priority	Test Type	Preconditions	Request Data	Expected Result
API_REG_01 2	Verify registration with maximum allowed name length	Medium	Boundary	API available	Name at maximum permitted length	Registration succeeds
API_REG_01 3	Verify registration with name exceeding maximum length	Medium	Boundary	API available	Name exceeds maximum limit	API returns validation error
API_REG_01 4	Verify registration with empty request body	High	Negative	API available	Empty JSON payload	API returns 400 Bad Request
API_REG_01 5	Verify registration with null values for mandatory fields	High	Negative	API available	Mandatory fields as null	API returns validation error
API_REG_01 6	Verify registration with special characters in name field	Medium	Validation	API available	Name containing special characters	Validation handled as per business rules
API_REG_01 7	Verify registration with leading/trailing	Medium	Validation	API available	Email/name with spaces	Spaces trimmed and registration

TC ID	Test Case Title	Priority	Test Type	Preconditions	Request Data	Expected Result
	g spaces in fields					processed correctly
API_REG_018	Verify SQL Injection attempt during registration	High	Security	API available	"" OR 1=1 --" in input fields	API rejects request and database remains unaffected
API_REG_019	Verify Cross-Site Scripting (XSS) payload in input fields	High	Security	API available	"alert('x')"	API sanitizes/rejects malicious input
API_REG_020	Verify registration request over HTTPS only	High	Security	HTTPS enabled	Send request over HTTP	Request blocked or redirected as per security policy
API_REG_021	Verify API rate limiting for excessive registration requests	High	Security	Rate limiting configured	Multiple rapid requests	API returns 429 Too Many Requests
API_REG_022	Verify sensitive data is not returned in API response	High	Security	Successful registration	Valid request	Password and sensitive data not exposed in response
API_REG_023	Verify response time for successful registration	Medium	Performance	API available	Valid request	Response received within defined SLA

TC ID	Test Case Title	Priority	Test Type	Preconditions	Request Data	Expected Result
API_REG_024	Verify concurrent user registrations	Medium	Performance	Load test environment available	Multiple simultaneous requests	API processes requests successfully without data corruption
API_REG_025	Verify correct response headers after successful registration	Medium	Functional	API available	Valid request	Content-Type, status code, and security headers are correct

Output for New Prompt:
